

Cross-consortia data review 2019

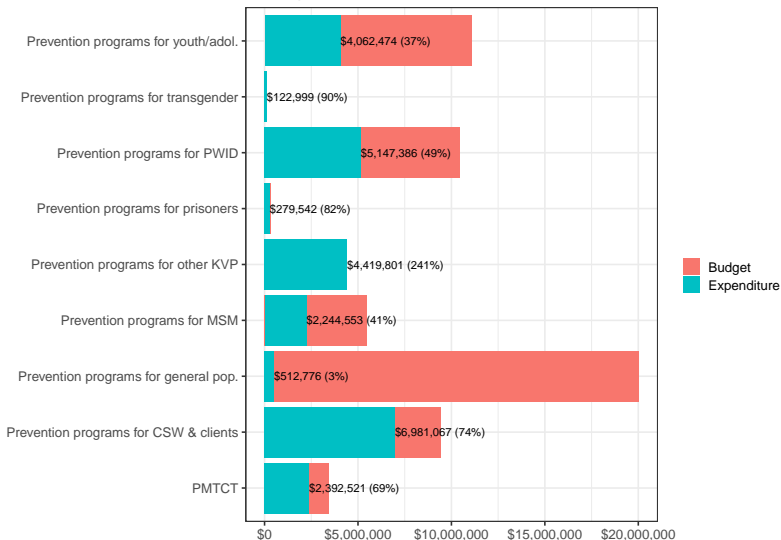

Emily Linebarger

January 14, 2020

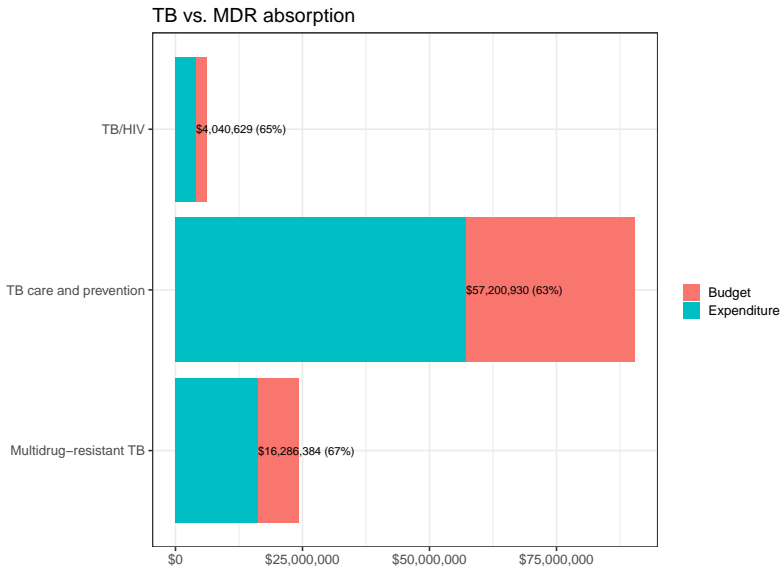

```
library(data.table)
knitr::opts_chunk$set(echo=FALSE, warning=FALSE, message=FALSE)
dt = readRDS("J:/Project/Evaluation/GF/resource_tracking/_c
source("C:/Users/elineb/Documents/gf/resource_tracking/ana
```

Is absorption lower for PMTCT, sex workers, and PWID than for MSM and transgender people?

Absorption for KP mods and PMTCT

MDR-TB is absorbing more poorly than general TB.

TB grants are absorbing better than HIV and malaria grants in general.

Absorption by grant disease

Absorption for financial systems (RSSH) was strong.

Community responses and systems has had low absorption across grants.
